Comments

The passenger compartment remained stable in the frontal offset test. Dummy readings showed good protection of the knees and femurs of the driver and passenger. Toyota showed that a similar level of protection would be provided for occupants of different sizes and to those sat in different positions. The driver's airbag was insufficiently inflated to prevent 'bottoming out', and the head contacted the steering wheel through the airbag material. Although dummy readings were not hazardous, the score was penalised and protection rated as adequate. Protection of the passenger dummy was good for all critical body areas. In the full width rigid barrier test, protection was good except for the chest of the front seat driver, protection of which was adequate and the chest of the rear seat passenger, protection of which was marginal. In both the side impact barrier test and the more severe side pole impact, the Hilux scored maximum points with good protection of all critical body regions. Likewise, tests showed that the whiplash protection provided by the front seats and head restraints was good in the event of a rear end collision and a geometric assessment of the rear seats indicated good protection there also. Increased whiplash protection is provided by an autonomous emergency braking system, available as part of the option pack. The system performed well in tests at the low speeds typical of city driving at which many whiplash accidents occur.

Comments

In the frontal offset test, neck tension and chest deceleration revealed, respectively, marginal and weak protection for those body areas in the 6 year dummy. Protection of the 10 year dummy was good, apart from adequate protection of the neck, and, in the side impact was good for all critical body areas for both child dummies. The Hilux has an automatic system for disabling the front passenger airbag when, for example, a rearward-facing child restraint is used in that position. The system met Euro NCAP's requirements and was rewarded. All child restraints for which the Hilux is designed could be accommodated. However, the group 1 ISOFIX seat needed care to ensure correct installation and the rear centre seat is deemed unsuitable for child restraints by Toyota, although restraints could be properly installed there.

System Name	Pre-Collision System with Pedestrian Detection as part of Toyota Safety Sense
Type	Auto-Brake with Forward Collision Warning
Operational From	10 Km/h
Additional Information	Defaults on for every journey; operates above 40km/h and in low ambient light

PERFORMANCE 	Autobrake Function	
	Avoidance	Mitigation
Running Adult crossing from Farside	Collision avoided up to 35 km/h	Impact mitigated up to 60 km/h
Walking Adult crossing from Nearside -25%	Collision avoided up to 25 km/h	Impact mitigated up to 60 km/h
Walking Adult crossing from Nearside -75%	Collision avoided up to 35 km/h	Impact mitigated up to 60 km/h
Running Child from behind parked vehicles	No crash avoidance	No crash mitigation

Comments

The bonnet provided good or adequate head protection over most of its surface, with some poorer results only along the front edge and on the stiff windscreen pillars. Protection provided by the bumper to pedestrians' legs, and the protection provided to the pelvis, was good at all points tested. An autonomous emergency braking system capable of detecting pedestrians is available as an option. Tests showed good performance, with impacts avoided or mitigated in many scenarios.

FOLLOWING A CAR AT LONG DISTANCE		
Car in front brakes gently	Avoidance	Avoidance
Car in front brakes harshly	Avoidance	Avoidance

Comments

The Hilux has a seatbelt reminder system as standard, covering the front and rear seats. All other items relevant to Safety Assist are provided in the optional safety pack. A lane assistance system warns the driver when the car is drifting over a lane marking. A camera-based speed assistance system recognises speed signs, including subsigns indicating speed limits for certain conditions (e.g. poor weather) and indicates the limit to the driver. The autonomous emergency braking system works at highway speeds and performed well in Euro NCAP's tests, with complete impact avoidance in some of the test scenarios.
