Explore New Worlds with Mammoth Overland's 'Tall Boy' Off-Road Trailer

Forget hiking. Mammoth Overland's Tall Boy trailer takes families to remote places in comfort.

- *Nine feet tall, weighing 2,900 lbs, and boasting 22 inches of ground clearance, all-aluminum Tall Boy is the tallest, toughest off-road camper trailer in its segment.*
- *Tall Boy can camp four adults in comfort with a full bathroom with standup shower, king-size bed and two full-length bunks.*
- *Priced at \$72,000, just ten examples of the Tall Boy "Genesis Edition" will be built.*

WOODINVILLE, Washington — Mammoth Overland, subsidiary of Vashion Aircraft, reveals Tall Boy, the brand's first full-height off-road trailer. Standing an imposing nine feet high, Tall Boy features a king-size bed, two full-length bunk beds, and full bathroom. Tall Boy is designed to take families further and more comfortably into the backcountry.

"As a teen growing up in Montana, I explored on foot places that most people couldn't. I always lamented that more families couldn't experience these amazing, remote spots," said Mammoth Overland President Scott Taylor. "We gave Tall Boy 22 inches of ground clearance, so that families could confidently and comfortably access parts of our country typically off limits to off-road trailers. Tall Boy combines the durability of our HV and ELE trailers with the amenities and spaciousness of home."

Just like Mammoth Overland's HV and ELE trailers before it, Tall Boy's aircraft-grade all-aluminum construction started with the king-size mattress — the feature Taylor's wife required. Designers then added two additional sleeping bunks, both long enough to comfortably sleep a six-foot-two-inch individual. When not in use for sleeping, the top bunk folds down to create a couch-like sitting area. The lower bunk also has access to a cubby in which an additional set of lighting controls are located. Beneath the king bed is storage space. Since designers created Tall Boy for families, the interior has dozens of USB ports throughout. And it includes a 24-inch LCD television.

Tall Boy's bathroom is a standout in the segment — and one that the Mammoth Overland team agonized over for months, redesigning it several times before landing on the final concept. It brings all the luxuries of home into the backcountry, including a shower, sink, and cassette toilet. Both the shower and sink benefit from Tall Boy's instant hot water system, which is fed by the onboard 50-gallon water tank.

Campers are kept warm by a powerful propane-fired Dickenson heater. Should they require a bit of fresh air, Tall Boy's windows tilt outward for additional airflow and it features two reversible fans in its roof.

Stepping outside through the aviation-style two-piece door (don't forget that Mammoth Overland's parent company is Vashion Aircraft), and down the fold-down stairs, campers can access the foldout kitchen.

Both the kitchen and the stairs are covered by a 270-degree 23 Zero awning. Rather than move it inside, designers kept Tall Boy's kitchen outside because, well, overlanding is an outdoor experience. Tall Boy's kitchen features a sink, stove, and 42-quart fridge. Though the kitchen is exterior, the pantry is a passthrough design, accessible from inside the cabin or outside.

Slightly more hospitable than the ELE trailer before it, Tall Boy is nonetheless off-road capable. It rides on dual independent axles to which 17-inch wheels wrapped in 33-inch tires are mounted. This setup gives Tall Boy a whopping 22 inches of ground clearance — far more than the next closest competitor. Tall Boy includes not one but two full-size spare wheels and tires, a front-mounted exterior molle panel, and ladder that provides access to the roof. The standard roof rack is rated to hold 1,000 pounds static and 500 lbs dynamic.

"Tall Boy is a testament to the incredibly skilled Mammoth Overland team," Mammoth Overland President Scott Taylor added. "They have proven themselves to be extremely capable and maneuverable while taking hit after hit and never slowing down — just like Tall Boy. I am so proud of this trailer and the entire Mammoth Overland team."

Electricity comes from one Renogy 400-amp-hour smart lithium-ion-phosphate batteries with self-heating technology. The batteries can be recharged while driving or by two 100-Watt Renogy lightweight flexible solar panels, which rest atop the exterior 23 Zero awning.

Pricing for the fully loaded Mammoth Overland Tall Boy "Genesis Edition" trailer is priced at \$72,000 and deliveries are scheduled to begin in Q4 2024. Like all Mammoth Overland trailers, Tall Boy is built to order. Pricing of standard Tall Boy trailers will be announced closer to the conclusion of the limited-run Genesis Edition.

Mammoth Overland is taking deposits now for Tall Boy's limited production run. Deliveries will begin in the fourth quarter of 2024. Buyers can learn more about Tall Boy on the Mammoth Overland website: <https://mammothoverland.com/>

Tall Boy will make its public debut at Overland Expo West in Flagstaff, Arizona May 17-19, 2024 at the Mammoth Overland booth L26.

About Mammoth Overland

Based in Woodinville, Washington, Mammoth Overland is a subsidiary of the U.S.-based aircraft manufacturer Vashon Aircraft — a company that loves the outdoors so much that it created its very own off-road camper. Made in the USA using the same precision and care it builds its airplanes, Mammoth Overland manufactures trailers unlike any other on the market today. Visit <https://mammothoverland.com/> for more information.
