## Chronology :

In 2021 Porsche became aware of a report of a single vehicle battery fire that occurred shortly after charging. Porsche investigated this incident and began obtaining comparable undamaged batteries from the field for analysis. In 2023, Porsche became aware of further instances of battery fires in Taycan vehicles after charging. Therefore, although the root cause analysis was still ongoing, on 6 December 2023 Porsche determined that a safety-related defect exists in the identified vehicles (manufacturer recall identification code APB5). Porsche continued investigating this issue together with the battery cell/module manufacturer, using in particular data analytics and hardware analyses. With this additional investigation and analyses, on 13 March 2024 Porsche determined that a safety-related defect exists in additional vehicles identified via data analytics and hardware analyses. As there are different batches of potentially affected Porsche Taycan vehicles which require different remedies, Porsche decided to conduct two different recalls on 13 March 2024 (manufacturer recall identification code ARA4 and ARA5): ARA4 applies to a vehicle population where Porsche has sufficient vehicle battery data. ARA5 applies to a vehicle population where Porsche does not or not yet have access to sufficient vehicle battery data.

## Description of Remedy :

Description of Remedy Program : As an interim remedy, the owner notification letter will advise that affected vehicles should only be charged to a maximum of 80% of the battery capacity.  
The affected modules in the high-voltage battery will be replaced.

The owner notification letter will advise that Porsche offers a reimbursement for pre-notification remedies in accordance with 49 CFR §573.13.

How Remedy Component Differs from Recalled Component : The vehicles were identified by data analytics based on latest root cause analyses to determine affected clusters in production. This report will be updated as necessary.

Replacement battery modules will be produced using improved cell production quality, as applicable.

Identify How/When Recall Condition was Corrected in Production : Vehicles produced after July 17, 2023 are not subject to this recall.

## Description of Remedy :

Description of Remedy Program : As an interim remedy, the owner notification letter will advise that affected vehicles should only be charged to a maximum of 80% of the battery capacity.

To determine the necessity for a possible HV battery module replacement, Porsche will obtain additional vehicle battery data (via dealer inspection, unless the customer activates over-the-air access to share sufficient vehicle battery data).

Once obtained, the data will be analyzed. Affected high-voltage battery modules will be replaced.

The owner notification letter will advise that Porsche offers a reimbursement for pre-notification remedies in accordance with 49 CFR §573.13.

How Remedy Component Differs from Recalled Component : The vehicles were identified by data analytics based on latest root cause analyses to determine affected clusters in production. This report will be updated as necessary.

Replacement battery modules will be produced using improved cell production quality, as applicable.

Identify How/When Recall Condition was Corrected in Production : Vehicles produced after March 4, 2024 are not subject to this recall.
