Outlook 2024

Mercedes-Benz Divisional Guidance 2024

ASSUMPTION

The premises regarding the economic situation and the development of automotive markets continue to be characterized by an exceptional degree of uncertainty. In addition to unexpected macroeconomic developments, uncertainties for the global economy and the business development of the Mercedes-Benz Group may arise in particular from geopolitical events and trade policy. Among them are the current Middle East conflict, the Russia-Ukraine war and other potential regional crises. Other uncertainties that are particularly worth mentioning include an exacerbation of tensions between the United States and China and a further deterioration of political relations between the European Union and China.

Further supply chain disruptions and, in particular, availability bottlenecks for critical components remain a significant risk factor. Sharp rises in energy and commodity prices, higher-than-expected inflation rates and interest rates, potential financial market disruptions and an even more pronounced slowdown in economic growth in individual regions or worldwide may also have an impact on the development of the world economy and the automotive markets.
