(57) **ABSTRACT**

System, apparatuses, and methods for bringing a shopping container to a customer in a shopping space are provided. A system for bringing a shopping container to a customer in a shopping space comprises a plurality of sensors, a plurality of motorized transport units, and a control circuit. The control circuit being configured to: receive a shopping container request from a user interface device associated with the customer, determine at least one available shopping container based on data collected by the plurality of sensors, the at least one available shopping container being empty and not used by another customer, select an available shopping container based at least on a location information of the user interface device, select a motorized transport unit to transport the available shopping container, and provide instructions to the motorized transport unit to bring the available shopping container to the customer.
